### Consensus Report 07/14/2016

Test Start Date -02/17/2016 Test Due Date -04/22/2016

This document reports the results of the Wildlife Genetics Proficiency Testing Program. The National Fish and Wildlife Forensic Laboratory was the duty Lab and was responsible for sample preparation, sample verification, distribution, and gathering and reporting the results.

The results are self explanatory and are divided into three sections:

- 1. Results of Test for Species Origin
- 2. Results of Determination of Gender Origin
- 3. Results of Individual Identification

Each section contains the following:

- 1. The species source that you identified for Items 1, 2 and 3.
- 2. The methods used to make these identifications.

#### Scenario

A Wildlife Agent is investigating a poaching incident involving white-tailed deer. The suspect claims the meat in his freezer is coming from one white-tailed deer. All three tissue samples were recovered from the suspect's freezer.

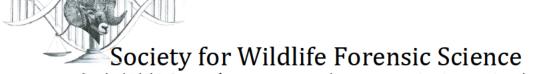

The Agent requests that the species and gender origins of all submitted evidence be determined. He is also interested in knowing whether the three submitted evidence items are from the same individual animal. It is not known where the poaching incident occurred.

#### **Items Submitted**

Item 1: Tissue from suspect's freezer.

Item 2: Tissue from suspect's freezer.

Item 3: Tissue from suspect's freezer.

Develop Wildlife Forensic Science into a comprehensive, integrated and mature discipline.
